

HUMBOLDT HYDRO FARMS

New Technologies for Food Production
A Eureka And Fortuna Community Schools Career Training Program

Commercial Accounts Information

The purpose of the Humboldt Hydro Farms Career Training Program is to provide career-related instruction, hands-on work experiences, research, and opportunities for interested Community School students as they participate in a student-run business.

This student-run business has the production capacity of producing 2,000 heads of lettuce weekly! Current production features greens, herbs and vine crops. Humboldt Hydro Farms' state-of-the-art facility is centrally located at Redwood Acres to provide tender, farm fresh produce to commercial accounts in our area. The backside of this flyer has a listing of the current and potential crops. What can the students grow for your business?

Commercial sales are now available. For a price list and more information, please contact Karen Brooks at (707) 445-7563 or email kbrooks@hcoe.org.

Imagine supporting a skills-based educational program that provides high-quality, local produce while using a fraction of the water and other resources! Many crops have a six-week growing cycle allowing for crop variations quickly. HHF can grow many summer-only crops all year long, like basil. Short-term and long-term growing agreements are available with flexible payment terms. Contact Karen Brooks to discuss your specific needs today!
